REC_DS using C_Week 5_COD_Question 5

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

In his computer science class, John is learning about Binary Search Trees (BST). He wants to build a BST and find the maximum value in the tree.

Help him by writing a program to insert nodes into a BST and find the maximum value in the tree.

Input Format

The first line of input consists of an integer N, representing the number of nodes in the BST.

The second line consists of N space-separated integers, representing the values of the nodes to insert into the BST.

Output Format

The output prints the maximum value in the BST.

Refer to the sample output for formatting specifications.

```
Sample Test Case
```

```
Input: 5
1051527
Output: 15
Answer
#include <stdio.h>
#include <stdlib.h>
struct TreeNode {
  int data;
  struct TreeNode* left:
  struct TreeNode* right;
};
struct TreeNode* createNode(int key) {
  struct TreeNode* newNode = (struct TreeNode*)malloc(sizeof(struct
TreeNode));
  newNode->data = key;
  newNode->left = newNode->right = NULL;
  return newNode;
// You are using GCC
#include <stdio.h>
#include <stdlib.h>
struct Node {
  int data;
  struct Node* left;
  struct Node* right;
};
struct Node* createNode(int data) {
  struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
  newNode->data = data;
```

```
return newNode;
         newNode->left = newNode->right = NULL;
       struct Node* insert(struct Node* root, int data) {
         if (root == NULL) return createNode(data);
         if (data < root->data)
            root->left = insert(root->left, data);
         else
            root->right = insert(root->right, data);
         return root:
       }
       int findMax(struct Node* root) {
         if (root == NULL) return -1;
         while (root->right != NULL)
            root = root->right;
         return root->data;
       int main() {
         int n, val;
         scanf("%d", &n);
         struct Node* root = NULL;
         for (int i = 0; i < n; i++) {
            scanf("%d", &val);
           root = insert(root, val);
         printf("%d\n", findMax(root));
         return 0;
       int main() {
         int N, rootValue;
         scanf("%d", &N);
         struct TreeNode* root = NULL;
         for (int i = 0; i < N; i++) {
            int key;
         scanf("%d", &key);
            if (i == 0) rootValue = key;
            root = insert(root, key);
```

```
